

# Meet Dave, Your Cybersecurity Watchdog

## What is Dave?

Dave is the digital bouncer, the guardian inside the door who's watching, listening, and paying attention to their surroundings; making sure nobody's trying to sneak in, that everyone's accounted for and that nothing untoward goes unnoticed. Dave is the eyes and ears of the support team, making sure that everyone's informed as to what's going on, so others can focus on their jobs in as safe and secure a manner possible.

Dave is eloquent enough to be able to brief the leadership team yet detailed enough to keep the technical folks on their toes. However, Dave is designed to alert the local team or designated geek only when necessary as Dave handles all the general clutter, initial support, and analysis. And just as any good companion does... Dave alerts when you need to pay attention. Dave has also gotten the briefings on how to measure, how to address the to-do list and what you need to deal with next.

Dave is your digital best friend.

## Why Dave?

- Dave is designed to free up resources and allow everyone inside the business to better focus on their core competencies.
- Dave works to track, trace, alert, and restrict the movement and activities an adversary will perform when they get into your environment.
- Dave tracks network assets and risks, two areas that tend to be neglected.
- Dave is designed to work 24\*7 every day of the year, focusing on safety and security risks that most organizations don't realize exist OR that might affect them.
- Dave will keep an eye on all the users, systems, and software patching across your environment, alerting that attention is needed when necessary.
- Dave isn't perfect, nothing is, we don't promise that, but Dave will give you more advanced warning, better recovery options, AND help on the remediation should you be targeted.
- Dave won't make friends with Alexa, Siri or any other devices in your office, but will most certainly watch and monitor what the heck they ARE doing...

## The Nitty Gritty:

- Dave comes in three model sizes scaled for your business needs.
- Security ratings, asset discovery, monitoring, patch verification, scanning framework, code repository reconnaissance, dark web monitoring, and other tools are built into ALL the options by default.
- One time install charge, then a monthly service fee thereafter. No messing, no contract, we'd like to keep you because we're doing it right NOT because we held your feet to the fire for 24 months.
- After 24 months if you still like us we'd like to change out the hardware and give you newer stuff... NO additional charge, no hassles, just swap out and carry on, just less dust on the equipment.

*NOTE: The Great Dane in the picture is Milo, one of the HHS family, he'll also answer to DAVE if you have snacks in your hand.*

# The Tech Supporting Dave

What's in the Box?	What We do ...	Small Model	Medium Model	Large Model
<b>What size do you need?</b>	We're NOT going to charge you by the IP or by the amount of data you send us, we've done the breakdown FOR you so all you. If we detect more than what you think you have, we'll have a conversation and talk with you about adjusting accordingly. Oh, and if you go over by one or two we won't come calling...everyone should have SOME flexibility in their business!	You're a small office or a normal sized home, along with the normal assortment of tech, systems, and pets...	You've got tech, it's a part of life, and a LOT of it's running round the office or home... The TV talks to the fridge, the microwave's fallen out with the door bell, and you've got a gaggle of folks running round the place with every gadget known to mankind...	Congratulations, you've got a floor of the building or you have your own location, you can probably afford to have "someone else" take care of this AND likely as not we'll end up working with AND helping your IT support folks (we DO love them AND recognize they need all the help we can give them)
<b>How many folks do you have?</b>	General number of folks in the office, house or general vicinity that we'd be helping	1-12 people	Up to 30 folks	50-100 folks or thereabouts
<b>How much technology?</b>	This is a rough number AND allows for some growth, we don't charge PER IP or any of that nonsense!	20-40 systems or devices we'd be watching	80-120 systems, devices or things that go ping...	200-350 devices, systems or a whole lot of data to watch...
<b>Security Ratings</b>	Proven rating systems using industry standards. Measured consistently AND can be used in conversations with leadership AND insurance	Included	Included	Included
<b>Asset Discovery</b>	Yep, we will baseline what you have AND then continually monitor to watch what comes in AND out of your environment...and we'll alert you to any changes.	Included	Included	Included
<b>Customizable Firewall, Spam, and Antivirus</b>	We've designed DAVE to have all the necessary functions to detect and protect, but also realize you might have some of this already set up, this stuff's there if you need it...	Included	Included	Included
<b>Security Monitoring</b>	We're watching AND we'll take care of the 1st level of support FOR you.	Optional	Included	Included
<b>Patch Verification</b>	We'll keep an eye on all your devices and help you understand what needs patching, when AND how...	Included	Included	Included
<b>Virtual Private Network</b>	The digital equivalent of privacy, or your own lane on the internet. Hopefully somewhere where other folks aren't listening in to ALL your conversations!	Included	Included	Included
<b>Scanning Framework</b>	We don't just want to throw random tools at the whole problem. We want to make sure that each technology, tool, and solution fits seamlessly AND provides the necessary cover.	Included	Included	Included
<b>Continuous Testing</b>	Continuous testing will be performed against identified targets on a regular basis to ensure integrity AND functionality of the security protocols AND that everything's working AND everyone's listening...	Included	Included	Included
<b>External Monitoring &amp; Intelligence Feed</b>	One of our founder's has built some of the most well known commercial AND governmental dark web engines that are in use across the globe, so we know a thing or two about this realm.... Yes, we've got you covered here.	Included	Included	Included
<b>Manual Checks</b>	You know as well as I do, that you're not getting a "dedicated" resource at this price point BUT we will use the TEAM we have to check, and double check what we find AND if you're on the elevated model we will take anything that looks nasty and actually assess it by hand to validate it...THEN we'll tell you about it.	Optional	Included	Included
<b>Wireless Analysis</b>	Looking at everything that's NOT directly connected by a piece of wire...	Included (Next Release)	Included (Next Release)	Included (Next Release)
<b>Backups</b>	Something we all forget to do, and something that unfortunately we don't think about until it's too late. We'll help you identify what assets need to be backed up, and then drop them out to a place where only YOU have the keys... Think of this as your digital safe.	Optional	Included (Next Release)	Included (Next Release)
<b>Accessibility</b>	You can get to your own portal through the web, on your phone, or simply rely on us to report out what's going on...	Included	Included	Included
<b>Hardware</b>	Blinky box of microchips that sits quietly in the corner	Included	Included	Included
